

Spatial Intelligence for Facilities

Factories are dangerous, risk of injury is significant. Many factories today have limited understanding, besides manual incident reporting, on what actually happens in their factory.

AiFi in Facilities

- Understand the position and behavior of people and objects within and throughout any space
- Build rules-based real-time alerts, metrics including video evidence, and analytics based on your KPIs and regulations
- Anonymous, GDPR-compliant key point tracking

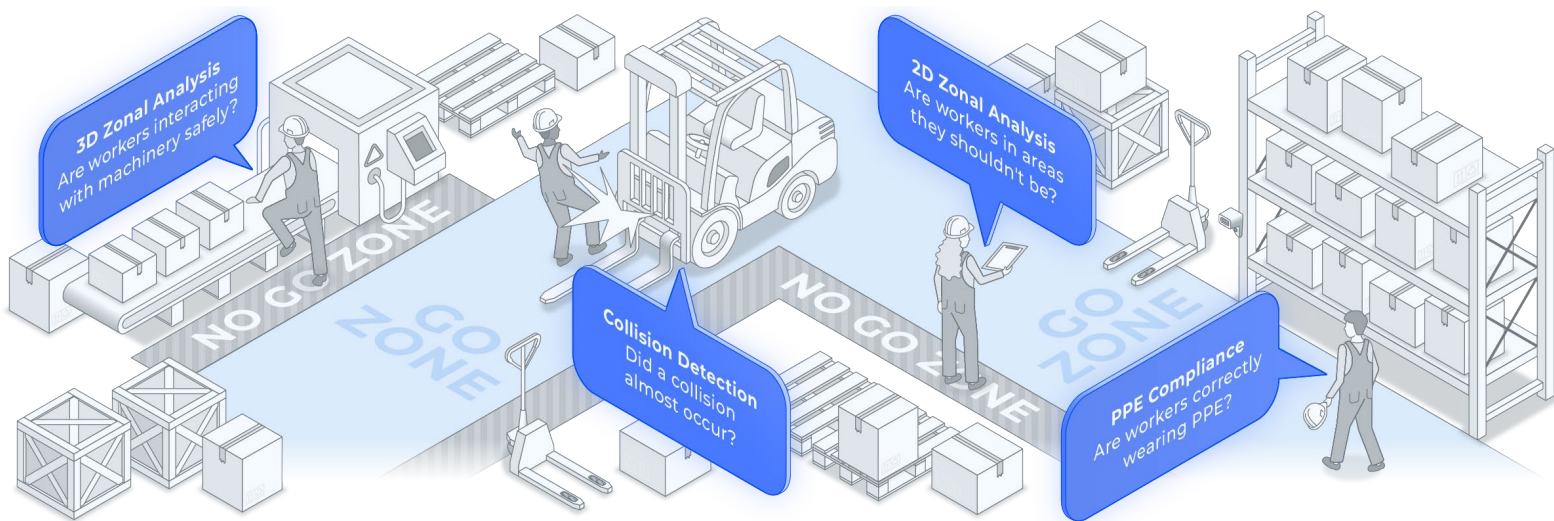

Facility Optimization

Get the most out of every square foot. Reduce costs and inefficiencies by leveraging accurate spatial data and analytics to plan your facility operations.

Facility & Worker Safety

Visualize and understand the position and behavior of workers and objects throughout any space to avoid safety hazards and inform improvements to maximize safety and efficiency.

- 2D and 3D zonal – are workers in areas where they aren't supposed to be, are there too many or not enough workers
- Near miss/collisions between people and static/dynamic machinery
- Hazard identification, PPE compliance, Safety procedure compliance

Using the **platform's unique interaction and tracking capabilities**, this solution can provide real time alerting and actionable data to elevate employee safety protocols, reduce incidents and identify improvements to operational performance within large facilities and warehouses.

Dashboards with key metrics and reporting

Why AiFi?

Track Accurately: High interaction fidelity key point tracking technology provides unparalleled accuracy in how facility areas and machines are used.

Robust Analytics: Build rules-based, real-time alerts and analytics with metrics and heatmaps per incident video evidence.

Flexible & Scalable: Platform designed to build further business logic for productivity, efficiency, and facility management.

Proven Technology: Launched in 200+ locations worldwide.

Privacy Controls: For GDPR compliance.
